

Health apps

On-demand access to caring@home resources

To assist health professionals supporting families, carers and patients, caring@home has designed purpose-built apps to give quick and easy access to resources to help manage end-of-life symptoms for a person who chooses to be cared for at home.

The resources are applicable Australia-wide for clinical services, health professionals, and families and carers.

Both apps are free and available for iOS and Android devices.

caring@home Indigenous app

Tailored and culturally-appropriate resources for:

- Aboriginal and Torres Strait Islander families
- Health professionals
- Clinical services

caring@home app (new 2023 version)

Standard resources for:

- Carers, in English and nine other languages
- Health professionals
- Clinical services

About caring@home

caring@home and caring@home Indigenous apps were developed as a part of caring@home.

caring@home, a National Palliative Care Project, is funded by the Australian Government and led by the Brisbane South Palliative Care Collaborative.

caring@home aims to improve the quality of palliative care service delivery for all Australians by developing resources to support carers and families to help manage end-of-life symptoms for home-based palliative patients.

Offline functionality

Resources can be downloaded and used offline, making it ideal for rural and remote health professionals who may have an unreliable internet connection.

Print capability

Health professionals can print documents directly from the app using local WiFi printer connection.

On-demand resources

Carers/families can benefit from immediate introduction and access to caring@home resources without the need to wait for hard copies to be delivered
