

# caring@home app

To assist health professionals supporting families, carers and patients, caring@home has designed a purpose-built app to give easy and quick access to resources for:

- Carers, in English and nine other languages (including training videos)
- Health professionals, and
- Clinical services.

The caring@home app is free and can be downloaded from:

## App features

### Offline functionality

Once all resources within the app have been downloaded, it can be used offline, making it ideal for rural and remote health professionals who may have an unreliable internet connection.

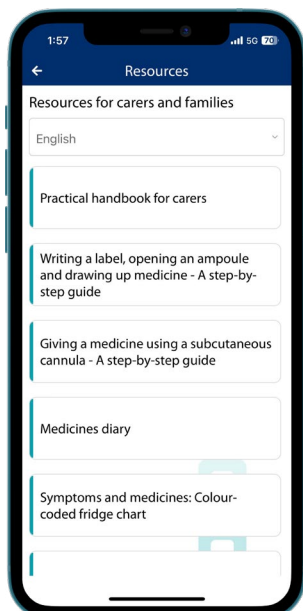

### Print capability

Health professionals can print documents directly from the app using local WiFi printer connection.

### On-demand resources

Carers/families can benefit from immediate introduction and access to caring@home resources without the need to wait for hard copies to be delivered.

The caring@home app was developed as a part of the caring@home project. caring@home is funded by the Australian Government and led by the Brisbane South Palliative Care Collaborative.

This project aims to improve the quality of palliative care service delivery for all Australians by developing resources to support carers and families to help manage end-of-life symptoms for home-based palliative care patients.

caring@home resources are applicable Australia-wide for clinical services, health professionals, and carers and families.
