

caring@home app

To assist health professionals supporting families, carers and patients, *caring@home* has designed a purpose-built app to give easy and quick access to resources for:

- Carers, in English and nine other languages (including training videos)
- Health professionals
- Community service providers, and
- Aboriginal and Torres Strait Islander families.

Features include:

- **Offline functionality** – Once all resources within the app have been downloaded, it can be used offline, making it ideal for rural and remote health professionals who may have an unreliable internet connection
- **On-demand resources** – Carers/families can benefit from immediate introduction and access to *caring@home* resources, without the need to wait for hard copies to be delivered
- **Print capability** – Health professionals can print documents directly from the app using local WIFI printer connection.

The *caring@home* app is free and can be downloaded from:

The *caring@home* app was developed as a part of the *caring@home* project. *caring@home* (2018 - 2021) and *caring@home* for Aboriginal and Torres Strait Islander Families (2020 - 2023) projects are funded by the Australian Government and led by the Brisbane South Palliative Care Collaborative.

These projects aim to improve the quality of palliative care service delivery for all Australians by developing resources to support carers and families to help manage breakthrough symptoms safely using subcutaneous medicines for a person at home.

- *caring@home* resources are applicable Australia-wide for community service providers, health professionals and workers, and families/carers.
- Resources that support the needs of Aboriginal and Torres Strait Islander families will be developed after national consultation, which is occurring now.
